

Assessment Test: Software Tester (QA)

Duration: 01:15 Hrs

Full Name:	Vidhan Mittal
Email ID:	vidhanmittal0@gmail.com
Contact Number:	9548063023

You are testing a **Task Management Application** with the following features:

- User **Registration & Login**
- Logged-in users can:
 - Create a task
 - View task list
 - Edit a task
 - Delete a task
- Tasks are stored in a database and displayed in a list

Assume the application is **close to production release** and has **no existing test documentation**.

Test Case Design

Write **test scenarios and test cases** for:

- Registration
- Login
- Task CRUD operations
- Input validation & error handling

Include **positive, negative, and edge cases**.

Bug Identification

List **8–10 potential bugs or risk areas** without executing the application. For each bug, mention:

- Bug description
- Severity (Critical / Major / Minor)
- Reason/Impact

Note

- You are **not expected to complete everything perfectly**.
- We evaluate **how you think, structure, and explain**, not just what you write.

Software Tester (QA) Assessment

1. Test Cases

A. Registration

1. Enter valid name, email and password → Registration should be successful. **(Positive)**
2. Register with an already registered email → Proper error should be shown. **(Negative)**
3. Enter invalid email format → Validation message should be displayed. **(Negative)**
4. Leave required fields empty → Required field message should be shown. **(Negative)**
5. Enter a weak/invalid password → Password validation should be shown. **(Negative)**
6. Enter different password and confirm password → Password mismatch message should appear. **(Negative)**
7. Enter minimum and maximum allowed input values → Application should handle them correctly. **(Edge)**
8. Click Register multiple times quickly → Duplicate account should not be created. **(Edge)**

B. Login

1. Login with correct email and password → User should login successfully. **(Positive)**
 2. Login with wrong password → Proper error message should be shown. **(Negative)**
 3. Login with unregistered email → Login should fail. **(Negative)**
 4. Leave email/password empty → Validation message should be displayed. **(Negative)**
 5. Enter invalid email format → Email validation should be shown. **(Negative)**
 6. Password should be hidden while typing. **(Positive)**
 7. Try to open task page without login → Access should be denied/redirected to login. **(Negative)**
 8. Try multiple wrong passwords → Application should handle repeated attempts properly. **(Edge)**
-

2. Task CRUD

Create

1. Create task with valid details → Task should be created and displayed.
2. Create task with required fields empty → Validation message should appear.
3. Enter minimum/maximum allowed values → Task should be handled correctly.
4. Click Create multiple times → Duplicate tasks should not be created.

View

1. Login and open task list → User's tasks should be displayed.
2. User with no tasks → Proper empty message should be shown.

3. Create a task and refresh → Task should still be present.
4. Check displayed task details → They should match the saved details.

Edit

1. Edit a task with valid details → Changes should be saved.
2. Edit and leave a required field empty → Validation should be shown.
3. Edit and click Cancel → Old data should remain unchanged.
4. Refresh after editing → Updated data should still be present.

Delete

1. Delete an existing task → Task should be removed.
 2. If confirmation is provided, click Cancel → Task should not be deleted.
 3. Delete task and refresh → Deleted task should not appear again.
 4. Try deleting the same task twice → Application should handle it properly.
-

3. Input Validation & Error Handling

1. Check all mandatory fields with empty values.
 2. Check invalid email and password formats.
 3. Try very long input values.
 4. Try special characters and unexpected input.
 5. Try script/HTML input → It should not execute.
 6. Try SQL-like input → It should not cause a database error.
 7. If server/database is down → Proper error message should be displayed.
 8. If network fails while saving → User should not see a false success message.
 9. If session expires → User should be asked to login again
-

5. Possible Bugs / Risk Areas

Bug / Risk	Severity	Impact
Same email can be registered multiple times	Major	Duplicate accounts can be created
User can access tasks without login	Critical	Unauthorized access
User can see another user's tasks	Critical	Privacy/data issue
Password is not stored securely	Critical	User credentials may be exposed
Created task disappears after	Major	Data may not be saved

Bug / Risk	Severity	Impact
refresh		properly
Deleted task comes back after refresh	Major	Database/delete issue
Multiple clicks create duplicate tasks	Major	Duplicate records
Very long input crashes the application	Major	Application becomes unstable
Server/database error crashes the application	Major	Poor error handling and bad user experience
Edit updates the wrong task	Critical	Incorrect data may be changed

My main goal would be to make sure that **the right user can perform the right operation, data is saved correctly, and invalid actions are handled properly.**
